DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Klaus et al. [US 5,245,307].

Klaus et al. discloses a planar inductance device [figures 1-3] comprising spiral planar windings wherein each winding is in the form of an “eight” with three cross conductors carrying current in the same direction and running between two loops.

Regarding claim 2, Klaus et al. discloses the cross conductors located parallel to each other [figure 1] and top and bottom one connected to terminals [42, 46].

Regarding claim 3, Klaus et al. discloses each loop including a plurality of windings and inner ends connected together [figure 2A].

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Klaus et al.

Klaus et al. discloses the instant claimed invention except for the specific of the winding loops.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to arrange the winding loops with one smaller than the other in Klaus et al. for the purpose of controlling the inductance of the device.

To add more metallization layer/plane would have been an obvious design consideration based on the intended application/environment use.
